

STREAMZ

FOR IMMEDIATE RELEASE

Freely Stream Online Music and Stored HD Quality Music Directly on your Headset with STREAMZ, the World's First Smart Headphones

STREAMZ are revolutionary headphones with the world's first built-in Android music player, color display, HIFI DAC and WiFi online connectivity

Salt Lake City – December 10, 2014 – [STREAMZ](#), the maker of the world's first smart headphones that include a built-in WiFi Android HD Music Player, is thrilled to announce it is beginning shipments of its breakthrough headphones the first quarter of 2015.

Streamz are being debuted in Suite 30-224 of the Venetian hotel at CES, Las Vegas Jan. 6 – 9, 2015.

“Streamz is the next major paradigm shift in wearable entertainment” said STREAMZ CEO Douglas Kihm.

“When it comes to music people want the absolute best quality whenever and wherever they go” said Kihm. “With Streamz you no longer need to bother with a separate player since it's all built inside. Many people don't want the hassle of carrying, connecting, and draining the battery of their phone. Now you can easily and instantly enjoy all of your high quality music at anytime, anywhere.”

Most phones and mobile music players have sub-par DACs and amplifiers so listeners are often forced to compromise sound quality for mobility. For the first time ever; music lovers can enjoy pure, uncompressed high fidelity audio anywhere with a headset that features a built-in Android music player, storage, color display, WiFi, Bluetooth plus a high fidelity DAC and amp.

[STREAMZ](#) are the first headphones that are able to store and autonomously play 96 kHz/24 bit HD quality or 44 kHz/16 bit CD quality music and instantly play online streaming music from services including Pandora®, Spotify® and soon CD quality streaming services including Tidal® and Deezer®.

Audiophile's will for the first time be able to listen to high definition quality 96 kHz/24 bit music anytime, anywhere without requiring an external wired DAC, Amp or music player since it's all built inside of Streamz.

Since STREAMZ are the first headphones to incorporate a wireless WiFi internet connection they also allow you to enjoy your favorite streaming service without having to be connected to a smart phone. Unlike all versions of Bluetooth including aptX®, WiFi does not compress audio nor does it introduce any transmission delays. Only Streamz WiFi delivers true uncompressed, delay-free streams of high definition audio.

With its Bluetooth 4.0 wireless interface and an optional Streamz Bluetooth audio transmitter called TRANZ, you can also watch a movie, TV show or play a game with unparalleled sound.

[STREAMZ](#) is perfect for gaming, with audio so crystal clear and immersive that users feel as though they have been dropped right into the middle of the action.

There are several easy ways to play Streamz music. Using its integrated 128 x 128 color OLED color display and keypad panel or with the included Android or iOS smartphone Streamz App you can easily search, browse and play music stored on STREAMZ, streamed from your smartphone or from an online music service.

Streamz plans to offer several new software updates including a Voice Controlling module called "VOXXI" that will allow users to search and play music plus other system controls with Google® voice commands.

The company is releasing a Streamz API called MAUI (Media Application User Interface) that will allow Android programmers to develop their own custom Android Apps and music services for Streamz.

"The launching of Streamz marks the advent of a new and exciting post-MP3 renaissance in music and hearables" said Kihm. "True wireless, mobile HD quality music is now a reality. This is the beginning of a whole new way to enjoy music how it was meant to be heard; simple, pure and freely".

Technical Specifications

- Android 1.6Ghz Quad Core Processor
- 96 kHz/24 or 48 kHz/16 bit (DAC) Digital Analog Converter
- Music Storage • Up to 36 GB
- Plays WAV, FLAC, ALAC, MP3, AAC, Pandora® plus many others
- WiFi Wireless • 801.11 B/G/N
- Bluetooth V4.0 Wireless with aptX™
- Two 50mm Dynamic Speakers
- Over Ear Leather Cushions
- Foldable, Adjustable Hinges
- Frequency Range • 20 HZ to 20 kHz
- Dynamic Range • 115 dB
- HIFI Amplifier with Volume and EQ Control
- Integrated Microphone
- OLED 128 x 128 Pixel Color Display
- Dual Backlit Keypad Control Panels
- Stereo 3.5 mm Input • For optional wired player/phone
- Stereo 3.5 mm Output • For optional wired amp/speakers
- Built-in Lithium Poly Rechargeable Battery
- Universal AC/DC Power Charging Adapter
- Android and iOS STREAMZ App • Admin and Music Player App

About STREAMZ

STREAMZ was founded with the goal of introducing breakthrough wearable entertainment or “exotainment” products that dramatically simplifies and enhances people lives and entertainment experience. Its flagship product STREAMZ Headphones, are the first WiFi streaming “smart headphones” that allow people to listen to high fidelity music and audio from multiple sources including online and from its own built-in storage, without requiring a separate music player or smartphone.
